

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

could give any Change to the natural Form of this Creature, but the strange Apprehensions that her Sentence had put her under, from the uncommon Creatures the Country to which she was sentenced might bring in her Sight. These odd Ideas that she had formed to herself, was all and the only thing, that had occasioned so great a Change from the natural Form the Child might otherwise have had, as she often asserted. I am,

S I R,

*Your very humble Servant,*

Tim. Sheldrake.

XI. *A Paper concerning the Mola SALU. or Sun-fish, and a Glue made of it; communicated by the Rev. Mr. William Barlow to the President of the Royal Society.*

*Stoke-Dock near Plymouth, Devon,*

*June 29. 1734.*

THERE was brought to this Place, struck the Day before in our River, a *Sun-fish* weighing about 500 Pound Weight. The Form of it nearly answers that given by Mr. *Willoughby*, except that the Tail of this was scollop'd.

This Fish differed very much in one thing from that described by Mr. *Willoughby*, whose Flesh, he says, was very soft: On the contrary, the Flesh of this was hard and firm, rather a gristly Substance than soft Flesh.

A Gentleman of my Acquaintance, Commander of a Vessel, tells me, his People took a *Sun-fish*, South of *Newfoundland*, which, by his Description, was considerably larger than that brought hither. They made no Use of the Flesh; but he remembers it was a gristly Substance, hard and firm.

A Piece of the Flesh boiled, to try how it would look and taste, to our Surprise, was all turned into a Jelly. Being soft and tender, it could not be taken out of the Saucepan with a Fork, but only with a Spoon; in Colour and Consistence nearly resembling boiled Starch when cold. It had little or nothing of the Fishy, but a grateful and pleasant Taste.

By the sticking together of my Lips, and from what I observed by touching it with my Fingers, I took Notice, that this boiled Flesh was clammy and glutinous; which brought to my Mind, that what the Antients made use of to serve the Purposes of Glue, was made from Fish. I then tried it upon Paper and Leather, and found it to answer the Use of Paste very well: And it was owing in part to Neglect, and partly to Accident, that it was not also tried upon Wood.

From this Discovery of the glutinous Nature of the Flesh of the *Sun-fish*, I would recommend it to those who have Opportunity to make farther Experiments upon it; and probably something useful, or curious at least, may be a satisfactory Reward for the Trouble they shall give themselves on that Account.

From the Descriptions given us of the *Ichthyocola* by *Dioscorides* and *Pliny*, the Glue-fish seems not

to be the same as our *Sun-fish*. Whether the Fish from which our Isinglass is made, be the same as the *Ichthyocolla* of the forementioned Authors, as the Name usually given to it seems to import, I cannot tell: But neither the *Ichthyocolla* of *Rondeletius* or *Bellonius*, nor the *Huso* taken in the *Danube*, from the Bladder of which Fish-glue is made, can, by the Descriptions given of them, be the same as the *Sun-fish*.

---

XII. *An Account of the Discovery of the Remains of a City under-ground, near Naples; communicated to the ROYAL SOCIETY by William Sloane, Esq; F. R. S.*

**A**T *Resina*, about four Miles from *Naples*, under the Mountain, within half a Mile of the Seaside, there is a Well in a poor Man's Yard, down which about 30 Yards there is a Hole, which some People have the Curiosity to creep into, and may afterwards creep a good way under-ground, and with Lights find Foundations of Houses and Streets, which, by some it is said, was in the Time of the *Romans* a City called *Aretina*, others say *Port Hercules*, where the *Romans* usually embarked from for *Africa*. I have seen the Well, which is deep, and a good Depth of Water at the Bottom, that I never cared to venture down, being heavy, and the Ropes bad. This City, it is thought, was overwhelmed by an  
Eruption
